

HA Case Study Report

MODERATE KNEE OSTEOARTHRITIS

Physician: Vinod Dasa, MD

Patient Information:

Age: 75 years old

Sex: Female

Weight: 181 lbs

Height: 5' 4"

BMI: 31

Diagnosis:

Moderate knee OA

Outcome:

Pain level at end of series: 0/10

Change in level of activity: Able to resume normal activities with no pain

Change in level of pain: decreased from 3/10 to 0/10

Adverse events: None

Overall satisfaction of the patient: The patient was pleased with the results and would repeat treatment as needed.

Comorbidities:

Age, high blood pressure, high cholesterol

Level of pain prior to HA series:

3/10

Prior treatments:

Hyaluronic acid (HA; SUPARTZ FX™)

Level of activity prior to HA series:

This patient is active and likes to travel and shop, but was having pain while doing so.

Treatment:

Product used: GELSYN-3

of injections: 3

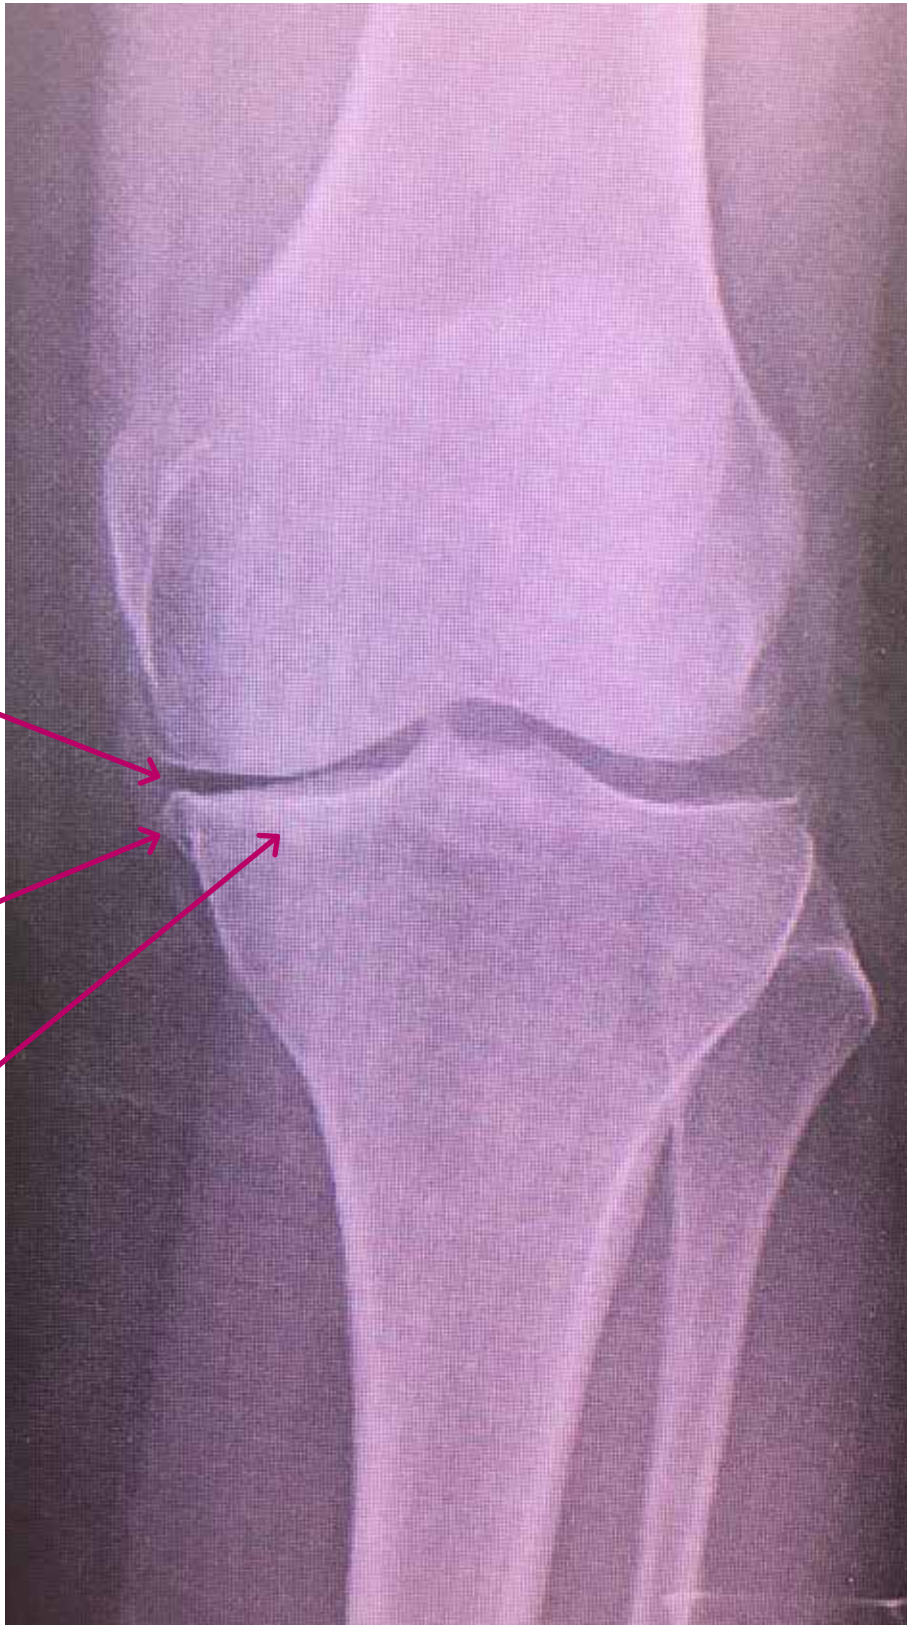

Dates of injections: 1 injection per week for 3 weeks in a row

Ease of use of the product: Easy

Additional comments:

The patient had good success with HA in the past and decided to try GELSYN 3 this time. The patient felt that GELSYN-3 worked better than SUPARTZ FX.

Indications for Use: GELSYN-3 is indicated for the treatment of pain in osteoarthritis (OA) of the knee in patients who have failed to respond adequately to conservative non-pharmacologic therapy and simple analgesics (e.g., acetaminophen). Do not administer to patients with known hypersensitivity (allergy) to sodium hyaluronate preparations. Do not inject GELSYN-3 into the knees of patients having knee joint infections or skin diseases or infections in the area of the injection site.

GELSYN-3 is not approved for pregnant or nursing women, or children. Risks can include general knee pain, warmth and redness or pain at the injection site. Full prescribing information can be found in product labeling, at www.GELSYN3.com or by contact customer service at 800-836-4080.
